Session 01 — Dev Environment Architecture

A visual diagram showing relationships between GitHub Codespaces, OS, runtimes, dev tools, and the browser preview.

Mermaid diagram (preferred)

```
flowchart TB
 %% Actors
 Dev["Developer\n(Browser or VS Code Desktop)"]
 Browser(("Browser Preview"))
 %% Codespace container (contains OS + DevTools + editor config)
 subgraph Codespace["GitHub Codespace 👀"]
   direction TB
   DevContainer[".devcontainer\n(config)"]
   subgraph OS["Ubuntu (container OS) 1"]
     direction TB
     Node["Node.js\n(runtime) @"]
     NPM["npm / package manager 🤪"]
   end
   subgraph DevTools["Dev tools & App"]
     direction TB
     Vite["Vite\n(dev server) f"]
     HMR["HMR\n(Hot Module Replacement) [2]"]
     Files["Project files\n(src/, public/) =="]
   VSCode["VS Code\n(remote editor) \_"]
 end
 %% Relationships
 Dev -->|opens remote session| VSCode
 VSCode --> | remote connection | Codespace
 Dev -->|open preview| Browser
 DevContainer --> OS
 OS --> Node
 Node --> NPM
 NPM --> Vite
 NPM --> React
 Files --> React
 React -->|built / served by| Vite
 Vite --> HMR
 HMR --> Browser
 Vite -->|serves on localhost| Browser
 %% Classes (styling)
 class Dev, Browser actorClass
 class Node, NPM osClass
 class Vite,HMR,React devtoolsClass
 class VSCode codespaceToolClass
 class DevContainer, Files diagNotes
```

```
%% Visual style definitions
classDef actorClass fill:#ffffff,stroke:#94a3b8,stroke-width:1px,color:#0f172a;
classDef osClass fill:#ecfdf5,stroke:#34d399,stroke-width:1px,color:#065f46;
classDef devtoolsClass fill:#fff7ed,stroke:#fb923c,stroke-width:1px,color:#92400e;
classDef codespaceToolClass fill:#eef2ff,stroke:#7c3aed,stroke-width:1px,color:#3730a3;
classDef diagNotes fill:#f8fafc,stroke:#e2e8f0,stroke-width:1px,color:#0f172a;

%% Optional styling for clarity (some renderers support 'style' for nodes)
style Codespace fill:#f0f9ff,stroke:#60a5fa,stroke-width:2px
```

Legend / Notes

- Codespace = remote container running Ubuntu with your project's config (.devcontainer).
- Node + npm = runtime + package manager used to install/run Vite and the React app.
- Vite = dev server with HMR; serves the app on localhost to the Browser preview.
- VS Code (remote) = editor connected to the Codespace for live editing.

ASCII fallback (for plaintext renderers)
